

The KEY to well-being is BALANCE

Many men and women are plagued with symptoms of hormone imbalance as early as their 30's.

The longer women go without the protection of estrogen or go without replacement therapy, the greater the risk of developing serious health problems including:

- Osteoporosis
- Diabetes
- Heart Disease
- Many Cancers
- Impaired Vision
- Alzheimer's Disease

Men and women both benefit from bio-identical Testosterone Replacement therapy. Both will experience:

- Greater mental clarity
- Increased libido and interest in sex
- Decreased body fat and an increase in muscle tone and mass
- Enhanced energy level and less fatigue
- Decrease in depression, irritability, mood swings

Bio-identical hormones are plant-based compounds that have the same chemical structure as the hormones created naturally in the body. Delivered in the form of a pellet, they deliver a constant hormone level for months at a time.

Our dosing is precise.

We start by accurately identifying the hormone levels in your blood in order to prescribe the optimal dose of hormone for your unique body chemistry.

Hormone pellets are the only type of hormone replacement therapy that deliver balanced hormones 24 hours a day, 7 days a week for three to six months.

Other delivery methods, i.e., creams, pills, patches and injections, cannot provide a steady delivery of hormones 24/7. Pellets provide a constant supply of hormone that your body recognizes as its own, which significantly reduces the chance of adverse side effects.

If you are looking for a natural way to regain your youthful vigor and energy with hormone replacement therapy, then BioTE® is for you. Decades of research and hundreds of thousands of patients testify that bio-identical hormone replacement therapy utilizing pellets is the answer!

Balance... is everything!

Be Your Best with BioTE®!

Enjoy Life Again with

Hormonal balance is absolutely necessary for good health as you age.
With BioTE[®] you can restore your hormone balance.

Absolute balance... Absolutely BioTE[®]!

Pellet therapy is not new

Hormone replacement using pellet implants has been used with great success in the U.S., Europe and Australia since 1939. In fact, they were a very popular mode of hormone administration in the U.S. until the 1970's when many oral and topical commercial products were developed.

Hormone pellets are identical to our own hormones and cannot be patented, so they have been ignored by the major pharmaceutical firms. Clinical studies during the past decade have proven the superiority of pellet therapy, and the remarkable impact it has had on the men and women who use it, without the side effects of synthetic drugs.

Pellet therapy uses bio-identical, all natural estrogen and testosterone, delivered by tiny pellets inserted just under the skin. The pellets are the storehouse of hormones which the body can access as needed. Pellets deliver a consistent level of hormone and outperforms oral, patch and cream prescriptions with fewer side effects.

When considering pellet therapy, it's important to know that your practitioner was trained by a BioTE[®] expert who studied hormone replacement therapy extensively so you can be sure that your dose is appropriate for your specific needs.

Over 70 years of research has illustrated the benefits of pellet implants in administering hormones to both women and men.

Expectations with BioTE[®]

- The quality of life given back to each woman and man is second to none
- Increased energy levels
- Restore or increase sexual drive
- Consistency in moods - no roller coaster feelings
- Decreased anxiety and depression
- Increased mental clarity and focus
- Greater capacity to get your body back in shape and stay in shape!
